

TEST PROJECT HTML/JS DEV

Background info: LUCY offers + 250 web based elearning courses. Those courses consist of html files with images, videos etc. We do not use any specific framework for developing code.

Goal: Our clients request changes to existing courses. Here is a typical change request «add a progress bar (2) in an existing training in one language (english version). The progress bar at top should show the overall progress + the progress in the specific lesson (3). That means under (3) it should show the name of the lesson. Additionally it should be visualized (2). The amount of points in the progress bar must dynamically be build based on the amount of main chapters. If possible: the more subchapters a lesson has, the larger the distance between the points. To make this visually work the background of the top bar must be darker:(1)

Template: You can download the template on the link below.

<https://www.dropbox.com/sh/kb54sbpsnokptv1/AADcV5XIcyA-oSldfVvC5IT4a?dl=0>

All you need is to upload the index file + the static directory (directory where all CSS, JS, images etc are) into a webserver:
